

Scanning website for vulnerabilities using Nessus

Nessus is a platform developed by Tenable that scans for security vulnerabilities in devices, applications, operating systems, cloud services and other network resources.

We will be using it to scan testfire.net.

Sev	CVSS	VPR	Name	Family	Count
Info	HTTP (Multiple Issues)	Web Servers	6
Info	Service Detection	Service detection	4
Info	Apache Tomcat Detection	Web Servers	3
Info	Nessus SYN scanner	Port scanners	3
Info	Common Platform Enumeration (CPE)	General	1
Info	Device Type	General	1
Info	Nessus Scan Information	Settings	1
Info	Open Port Re-check	General	1
Info	OS Identification	General	1
Info	Traceroute Information	General	1

The scan shows us that there are no vulnerabilities on the website. So it shows us info about the various services running on website.

After analyzing the report from nessus, we can safely say that the website is safe and has no vulnerabilities.
